

Solid Waste Management

ERG's engineering staff has a wealth of experience in the planning, design, permitting, construction and operation of solid waste management facilities, including landfills, transfer stations, recycling centers and waste-processing operations. We are specialists in the design of landfill gas and leachate management systems, including landfill gas-to-energy applications.

- Waste Disposal Facility Siting and Evaluation
- Economic Analysis and Feasibility
- Fill Design and Capacity Evaluation
- Landfill Gas System Design and Utilization
- Landfill Gas-to-Energy Design
- Leachate Management and Treatment System Design
- Permit Application Preparation
- Site Closure Design
- Hydrogeological Investigations
- Groundwater Monitoring
- Geophysical Surveying
- Litigation Support
- Regulatory Compliance
- Stormwater Management
- Construction Quality Assurance (CQA)
- Wastestream Handling, Management and Minimization
